

## Dual Programs

### Program Overview:

To encourage and accommodate students who desire to study engineering but who, for various reasons, may prefer to attend another college before coming to Georgia Tech, the College of Engineering offers the opportunity to transfer to Georgia Tech through the Dual Degree Program. Under this program, students attend the participating Dual Degree School for three years and then come to Georgia Tech for approximately two years. Each participating liberal arts college requires the completion of a specified curriculum to qualify for their baccalaureate from that institution as well as the necessary institutional core requirements for the engineering degree. Dual Degree students may seek a degree in any undergraduate program in the College of Engineering. Upon completion of the program at Tech, the student receives a bachelor's degree from the former institution and a bachelor's degree in one of the engineering disciplines at Georgia Tech. Students interested in the dual degree program apply through their college. The participating schools include many of the schools in the Georgia University System, and several historically black colleges and predominantly women's colleges.

## Off-Campus or Distance Learning—DLPE

### Program Overview:

Georgia Tech offers seven M.S. degree programs via distance delivery. To enroll in the program, you must meet the same admission requirements as those who attend classes on campus. You will need to adhere to Georgia Tech's rigorous academic standards to earn the same degree as your on-campus counterparts. You may apply any time to Georgia Tech for admission the following term. Upon acceptance to the program, working engineers typically enroll in one course per term. Most companies provide tuition reimbursement for these classes.

Most of the degree programs require thirty credit hours (typically, 10 courses) to obtain a master's degree. A thesis is not required, and you must maintain a 3.0 grade point average. Please refer to the websites of each of the programs for curricular details.

## Off-Campus or Distance Learning—Georgia Tech Regional Engineering Program (GTREP)

### Program Overview:

The [Georgia Tech Regional Engineering Program \[GTREP\]](#) is an academic collaboration between Georgia Tech and three partner institutions: Armstrong Atlantic State University and Savannah State University in Savannah, and Georgia Southern University in Statesboro. During the freshman and sophomore years of the undergraduate program, students are enrolled through one of the three partner institutions. These universities offer all of the mathematics and science courses and some of the engineering courses required in the first two years of the Georgia Tech engineering curricula. Prior to their junior year, students apply for transfer admission to Georgia Tech and complete their degree program as a Georgia Tech student. Students remain physically located at the campus of the partner institution, but are taught by local Georgia Tech faculty supplemented by distance learning connections. Non-engineering portions of the degree program continue to be offered by the partner institutions during the junior and senior years. Currently, GTREP offers undergraduate degree programs in civil, computer, electrical and mechanical engineering. Students graduating from GTREP receive a Georgia Tech degree with the designation Regional Engineering Program.

## Off-Campus or Distance Learning—Georgia Tech Savannah

### Program Overview:

Established in 1999 with the creation of the Georgia Tech Regional Engineering Program, Georgia Tech Savannah was conceived as a far-reaching program that would unite education, industry and technology in Georgia's Southeast region. The on-line graduate program in Mechanical Engineering was added to the curriculum in the fall of 2000, followed by on-site graduate programs in Electrical and Computer Engineering and Civil and Environmental Engineering in 2001. The underlying emphasis in all of the graduate programs offered by Georgia Tech Savannah is digital engineering. While more traditionally innate in disciplines such as computer engineering and electrical engineering, digital engineering is being stressed as a program core in other fields, with a focus on sensors, software and simulation to solve engineering problems. Georgia Tech Savannah is located in the Technology and Engineering Campus (TEC), an innovative interpretation of the traditional office park designed to house private industry, community development offices, business incubators and others in a university campus environment.

## Off-Campus or Distance Learning—Georgia Tech Lorraine (GTL)

### Program Overview:

[Georgia Tech Lorraine](#) (GTL), the Georgia Institute of Technology's (Georgia Tech) platform into Europe is a non-profit corporation operating under French law. Its activities are divided into five main areas:

- Graduate level education, with degree programs offered in electrical and computer engineering and in mechanical engineering. Several double degree programs leading to the Master of Science from the Georgia Institute of Technology and French degrees from carefully selected engineering institutions are also available at Georgia Tech Lorraine.
- Sponsored research, with programs directed toward specific opportunities in the European community. Such activity has led to the creation of a joint research laboratory, GTL-CNRS Telecom, between the Centre National de la Recherche Scientifique (CNRS) and Georgia Tech at Georgia Tech Lorraine. The main thrusts of research of this laboratory are in the areas of secure and high-speed telecommunications.
- Undergraduate summer program offered in electrical and computer engineering and in mechanical engineering, management, and international affairs.
- Continuing education targeted at practicing engineers and managers.
- Local economic development targeted at hosting high-tech companies.

Opened in October 1990, Georgia Tech Lorraine is a highly innovative venture under which an American university offers graduate programs in Europe. At GTL students can completely fulfill degree requirements toward the Master of Science degree from the Georgia Institute of Technology, and they can partially fulfill requirements for the Ph.D. degree. When joining this program, students from around the world get the opportunity to study and take courses taught in English by Georgia Tech faculty assigned to Georgia Tech Lorraine.

Moreover, cooperative agreements with local partner institutions enable GTL students to pursue double degree programs in engineering and sciences, in addition to degrees from Georgia Tech. Within the framework of these agreements, students may take courses offered by these partner institutions in their local language. Upon successful completion of these highly innovative and integrated programs, students are awarded a Master's degree from Georgia Tech and a Graduate Diploma from a partner institution.

Therefore, GTL students are well-equipped to become the leading engineers, scientists and managers of the future. Not only do they acquire an excellent engineering foundation, but they also emerge with the ability to recognize and adapt to the new requirements of the global market and the emerging European academic, research and industrial arenas.

## Off-Campus or Distance Learning—Executive Master of Science in International Logistics (EMIL)

### Program Overview

[EMIL](#) is a Master's degree program delivered in an Executive format over an 18-month period. Participants meet for two-weeks of intensive classes (residences) every 3-4 months. Members participate via distance learning alternatives between residences. In total, there are 5 EMIL residences.

EMIL residences are held in the US, Europe, Latin America and Asia - attracting class members from many countries around the world. Residences focus on the regional influences shaping logistics as well as topics like reverse logistics, labor relations, freight management, procurement, distribution and warehousing.

Locations visited during the program include: Atlanta, Belgium, France, Germany, Brazil, Singapore, Hong Kong and China.

Courses are delivered through faculty lectures, industry speakers, case studies, group projects and company presentations. During international residences, participants meet with government officials to discuss customs issues, taxes and trade agreements. This allows participants to experience first-hand the regional influences on global supply chains across several continents. Between residences, participants work together on cases and complete web-based course material.

## Transfer Programs—Regents' Engineering Transfer Program (RETP)

### Program Overview

The [Regents' Engineering Transfer Program](#) (RETP) was designed for students in the state of Georgia who want to study engineering, but who for various reasons prefer to attend another college before coming to Georgia Tech. Students in this program attend one of thirteen participating institutions where they take all of the mathematics and science and many of the engineering courses required in the first two years of an engineering program at Georgia Tech. Upon successful completion of these classes, the students transfer to Georgia Tech to complete the requirements for an engineering degree.

By enrolling in the RETP, students may attend college close to home, which can decrease the cost of their education and ease the adjustment to college life. Generally, classes at the RETP institutions are small, which permits more individual attention and interaction with professors. At the same time, RETP students enjoy many of the advantages of Tech students: they have equal access to engineering majors at Tech, they can participate in the Co-op program, and they are invited to the Tech campus each spring for campus tours, information sessions, and meetings with advisors in their engineering major.

## International Education—Exchange Programs

### Program Overview:

The main types of programs available to GT students are:

#### Exchange Programs

- Offer opportunity to be immersed in a foreign country
- Take classes in a foreign university along with the degree-seeking students there
- Classes are pre-approved to transfer back to GT
- Many are taught in English
- Continue paying regular GT tuition and fees
- Students participate for one or two semesters
- Each major at GT has at least one exchange partner with course work in that major
- Most financial aid can be applied towards participation in these programs

#### Study Abroad Programs

- Offer GT credits
- Most offer a full-time load of credits
- Are mainly taught by regular GT faculty
- Travel as a group with other GT students
- Out-of-state students get a significant tuition break (over \$3,000 in savings) on these programs
- Most take place in the summer
- Most financial aid can be applied towards participation in these programs
